NEW SCANNERS TO BE UNVEILED AT AIIM Forum UK

One of the country's leading manufacturers of consumer, prosumer and professional office imaging devices is set to make one of its highly-anticipated scanners available to the public for the very first time next month.

Plustek UK – Telford, is preparing to exhibit at the AIIM Forum UK 2015 on Wednesday 24th June at the Ibis London Earls Court (ILEC), where it will unveil its eScan A150 series.

Shooping Lin, Sales Director at Plustek, explained: "We're really excited to be showcasing our new eScan A150 product at AIIM Forum UK 2015 next month, which recognises the latest information management innovations. This model has been designed specifically for use by a wide range of industries – from legal and financial, to retailing and education."

The eScan A150 allows users to scan documents quickly using its 7inch LCD screen, as well as review and crop images before delivering final versions to a wide range of locations, including Clouds, servers and networks, emails, mobiles, and USB drives. Ideal for use in an office environment, the scanner takes up little space with no requirement for a connection to a computer.

Shooping added: "The scanner has been tested and trialed by many businesses, both big and small, and the feedback we have received has been extremely positive. The core purpose of the eScan A150 is to provide a quick way of scanning which is easy to save and send, and take up little space."

Although no computer is required for using the eScan A150, it is compatible with Apple and Microsoft computers and laptops, and can be linked to a dedicated eScan mobile phone app.

With a 7inch, 600dpi resolution touch-screen, the eScan is incredibly easy to operate and no previous experience, training or installation is required. Scans can also be sent to multiple locations, meaning that copies can be made and shared with others at the touch of a button – minimising paper usage and saving valuable time.

Key features of eScan A150 include:

- Standalone scanner with seven-inch LCD touch screen (no computer required)
- Fully networkable scanner utilizing both WLAN and WiFi connections
- Completed scans can be sent to a USB drive, network folder, mobile, email address, or variety of clouds including Dropbox, Google Drive, Evernote, Box, SharePoint and FTP
- Easily integrated into existing document management environments
- 50-sheet, automatic document feeder
- 25-page-per-minute (50 images-per-min in duplex mode) scan speed

Plustek Inc, Telford, has invested heavily in researching the requirements of its users, which established a need for a scanning device that could be used by entrepreneurs and professionals, self-employed and individuals working in an office environment.
