Press Release

PLUSTEK INTRODUCES "OFFICE REVOLUTION 4.0" AT COMPUTEX 2022

Brand new automated data extraction technologies aimed at reducing operating costs and optimizing workflow

Taipei, Taiwan, COMPUTEX [Booth L0628, TaiNEX & DigitalGo] (May 4, 2022) --- Plustek Inc. (www.plustek.com), an industry-leading manufacturer in imaging and scanning technologies, will be proudly demonstrating the latest offerings in digital document transformation. 2022 marks the third year of the global pandemic, and it has shown no signs of slowing down. The inconvenience and fear perpetuated by COVID-19 have forever changed how humans operate businesses and institutions. As a result, Plustek is steadfast in its pledge to fully upgrade its core technologies with the integration of artificial intelligence. Thanks to big data analytics, neural network, and deep learning, Plustek is thrilled to announce the era of "Office Revolution 4.0" is finally here. The demonstration will comprise seven application scenarios to illustrate the efficiency and productivity brought by document automation and digitization.

Some highlights are as follows:

Intelligent Data Capture: Plustek combines the power of optical character recognition, artificial intelligence, and automatic tag recognition to bring document capture to the next level. By extracting information from unstructured documents and then automating repetitive work, reducing a significant amount of operating costs. Plustek's robotic process automation populates respective fields. Data can be exported as CSV, JPG, HTML files and connected with Oracle, SQL, Web API, ERP, etc. This technology greatly benefits accounting departments, CPAs filing taxes, company reimbursements, inventory management, forwarders, and hotel check-ins.

Intelligent ID Capture: Empowered by artificial intelligence, Plustek's ID Capture technology reads identity documentation such as passports, regional identification cards, driver's licenses, and vaccine passports and offers customization for reading visual inspection zone data. While it scans and saves images and parses data, the processes are end-to-end encrypted for maximum security. This total solution is perfect for minimizing human errors, lowering operational costs, and boosting efficiency. With more governments gradually deregulating self-service procedures, more businesses move towards contactless solutions and eliminating physical transactions.

Smart Education Solutions: By working closely with system integrators around the globe, Plustek can produce high-quality scanners, especially in larger A3 formats, recognition engines for reading answer sheets, and comprehensive note-taking systems unmatched by any other product in its price range. Thanks to cloud technology, the solution allows students to build personalized test banks and digital flashcard databases to be accessed and reviewed anywhere.

The pandemic has drastically reshaped society, and the rise of AI applications is the primary driving force behind the scenes. We welcome all businesses to bring forth documents that need to be digitalized and extracted and speak with one of our digital transformation experts to experience the power of "Office Revolution 4.0."
